PROFILE

Systems developer with a BSc in Informatics (Systems Development Engineering, Universidade Save, 2024) who builds complete web and mobile products, from the backend to deployment. I have built an online store with M-Pesa and e-Mola mobile-money payments, a ride-hailing platform with real-time tracking and a multi-tenant SaaS for facial-recognition access control. Background in IT support, networking and Linux servers, with cybersecurity training from Cisco Networking Academy.

PROJECTS

SaveGuard — Facial-recognition access control — SaaS product
FastAPI · React · TypeScript · TensorFlow.js · PostgreSQL · WebSockets · Docker

- In-browser face recognition with a blink liveness check against photo spoofing; identity re-verified on the server before the door opens.
- Drives real locks (Shelly Wi-Fi relays, USB relays, Raspberry Pi) and sends photo alerts by email, Telegram and webhook.
- Multi-tenant SaaS: teams and roles, plans with a free trial, door kiosk mode and a real-time security dashboard.

Motice Congelados & Diversos — Online store — Client project
Django · Django REST · PostgreSQL · Redis · PWA · Docker

- Mobile-first store installable as an app (PWA), fast on slow networks.
- Payments via M-Pesa (Vodacom C2B API), e-Mola, mKesh, PayPal/card and cash on delivery, all verified server-side.
- Delivery zones with fees, customer location on a map and a phone-first admin panel.

Boleia+ · Chibuto Ride — Mobility platform — Startup · closed beta
Django · DRF · PostGIS · Celery · Redis · Flutter · Next.js · Leaflet

- Flutter passenger and driver app: phone + OTP sign-up, live trip tracking, boarding PIN and an SOS button.
- Geospatial API and an operations dashboard with live maps (in production).

Stock & Venda — Inventory and point of sale — Business system
PHP · MySQL · JavaScript · Bootstrap

- Product catalogue, stock intake and sales with automatic stock updates, user accounts and sales reports.

EXPERIENCE

Freelance Full-Stack Developer — Independent — 2023 — present

- E-commerce, mobility and access-control systems for clients and my own products.

Technical-Professional Intern — INAGE, National Institute of e-Government (Gaza) — 2025

- Substitute trainer for the Basic Computing course and IT technical support.

Technical-Professional Intern — Xai-Xai City Council — 2024 — 2025

- IT support for municipal services: hardware, software, networks and users.

Technical-Professional Intern (Systems Development) — Universidade Save — 2023

- Installed and configured the university e-mail server (Zimbra).

EDUCATION

BSc in Informatics — Systems Development Engineering — 2020 — 2024
Universidade Save, Mozambique

- Final project: facial-recognition access control with security alerts.
- Presented the project at the II Scientific Conference of Universidade Joaquim Chissano (2023).

COURSES — CISCO NETWORKING ACADEMY

2025: Ethical Hacker · Cyber Threat Management · Networking Essentials · Python Essentials 1 · English for IT 2
2023: Introduction to Cybersecurity · Networking Basics

TECHNICAL SKILLS

Backend: Python, Django, Django REST, FastAPI, Java, PHP, C#
Frontend & mobile: React, Next.js, TypeScript, Tailwind CSS, Bootstrap, PWA, Flutter/Dart
Databases: PostgreSQL, PostGIS, MySQL, Redis, SQLite
DevOps & systems: Docker, Nginx, Git, CI/CD, Linux (Debian, Ubuntu, Kali), Windows, Zimbra mail server
AI & security: Computer vision, TensorFlow.js, OpenCV, ethical hacking, computer networks

LANGUAGES & OTHER

Languages: Portuguese (native), Changana (native), English (professional)
Blog: cybersecurity and Linux articles and tutorials at cyber-gorilla.blogspot.com
Other: Driving licence (light and heavy vehicles) · Military service completed (2015 — 2016) · Available immediately
